## Company Profile

ORELTECH is a trailblazer in the field of new metallization inks and is focused on R&D of new technologies for printing thin functional metal coatings. These inks can be easily printed on a variety of substrates including plastic, paper, textiles, ceramics, transparent substrates and 3D structures. ORELETCHE inks do not contain nanoparticles, are significantly environmentally friendlier and more cost-effective than the alternatives.

## Business Field/Core Technology/Strength

This technology utilizes inkjet/aerosol printing and other conventional printing methods as well as cold plasma for curing. This allows keeping the process temperature at  $<70^{\circ}$  C and working with even the most sensitive substrates. ORELTECH offer functional metal-based inks for different applications and assistance in integration of metallization technology into customer's production line.

Core competences:

- Functional metal-based inks
- R&D for custom products
