Company Profile : Toshiba Electronic Devices & Storage Corp. has business of Semiconductor, HDD, Semiconductor manufacturing machines and Materials. Power electronics application such as power supply or motor control and drive are the focus area. HDD focus on Data center storage. New semiconductor material, 3D sensing and Organic semiconductor are representative research items.

Industrial

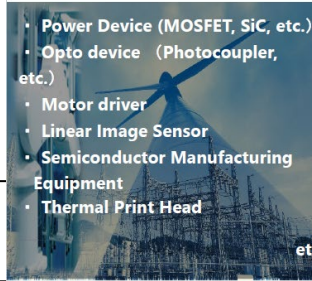

- Power Device (MOSFET, SiC, etc.)
- Opto device (Photocoupler, etc.)
- Motor driver
- Linear Image Sensor
- Semiconductor Manufacturing Equipment
- Thermal Print Head

Automotive

- Motor driver
- Power Device (MOSFET, IGBT, etc.)
- Photocoupler
- Bridge IC
- Fine Ceramics

Data Center

- Large Capacity Nearline HDD
- Power Device for Power Supply

Business Field/Core Technology/Strength :

Wide line-up of power electronics related products including SiC device. And peripheral functions are also offering such as isolation coupler, protection device, and Micro controller for system control. That is, providing total solution is the strength point.

Toshiba Corp. provides solutions for Social Infrastructure system. Core concept is CPS technology such as, Cyber architecture by using cloud AI technology, and, Intelligent Physical technology embedded at Device /Edge. Toshiba Electronic Devices & Storage Co., Ltd. provides recommended products for configuring physical layer solutions.
